

ICG 2024 Spring HW1 Guidance

March 6, 2024

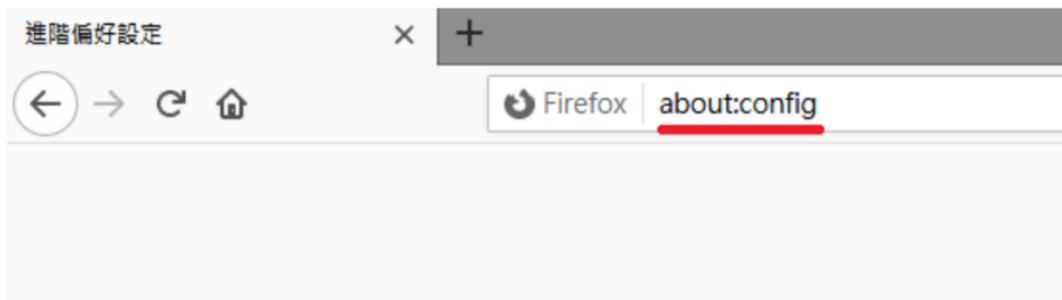

Environment Setup

In this homework, there may be issues with loading resource files when running WebGL locally. It is recommended to upload the resource files on a web hosting service. **If you prefer to run it locally, it is strongly advised to use Firefox.** Additionally, we recommend not using the latest version of Firefox. Instead, we suggest using version **94.0b8**, which can be downloaded from the following link: <https://ftp.mozilla.org/pub/firefox/releases/94.0b8/>. Next, please follow the steps below for configuration.

NOTE. When installing Firefox, please choose custom installation and do not install maintenance services, otherwise Firefox will automatically update to the latest version upon opening.

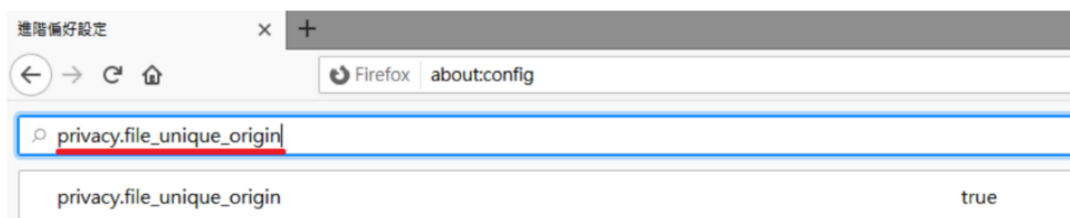

Step 1

Open the Firefox browser, type "**about:config**" in the address bar, and proceed by selecting "Accept" when prompted.

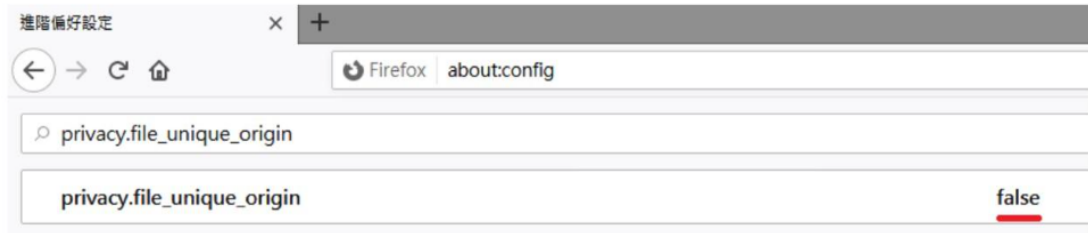

Step 2

Type "**privacy.file_unique_origin**" in the search bar.

Step 3

Change the setting of "**privacy.file_unique_origin**" to **false**.

After completing the configuration, close Firefox, reopen the index.html, and if you see the teapot, the setup is successful.
